Consult Note:

Provider Specialty:

Plastic Surgery.

Referral/Consultation:

Initial Consult:

- Requested by Name: ER
- Date/Time: 02-Jan-2024 00:47
- Reason for Referral/Consultation: Dog bite to the face, open wounds

Assessment and Recommendation:

• Assessment

S/p dog bite on 1/1/2024 multiple perioral open wounds. Per patient report dog is vaccinated.

PMH: chronic pain back and hip

PSH denied

NKDA

PE: right oral commissural modiolus area avulsion wound about 1 x 1 cm deep through the muscle, irregular, undermined lower skin flap.

Right lower outer lip 2 cm deep through the muscle avulsion wound with irregular, macerated skin edges.

Lower central lip about 0.7 cm open wound.

Right lateral lower lip multiple puncture wounds>

I discussed in details significantly increased of infection risk of dog bite wound, possible need for additional procedures to drain infection increased risk of scarring.

Risks including but not limited to bleeding, infection, scarring, need for multiple procedures, asymmetry, neurological deficits and pain discussed.

need for a close follow up was reviewed.

Procedure:

Local Lidocaine 1% +1:100,000 Epi 4 ml, washout with saline and iodine.

Closure:

Right commissure area devitalized skin and soft tissue was sharply debrided with scissors. Remaining wound 1 x 1 cm² was closed by rearranging remaining lip tissue and closing with 5-0 Vicryl on the muscle and 6-0 Fast gut on mucosa leaving spaces for drainage.

Right lower outer lip area was sharply debrided with scissors to remove thinned out devitalized tissue. Remaining wound measuring 2 x 0.5 cm was closed by rearranging remaining lip tissue and closing with 5-0 Vicryl on the muscle and 6-0 Fast gut on skin leaving spaces for drainage.
